NIKHIL REDDY LEVAKU

+91-6303252008 | levakunikhilreddy8@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

DevOps-focused engineer who provisions, automates, containerizes, and monitors multi-service applications using **Linux**, **Terraform** (IaC), **Ansible**, **Chef**, **Docker**, **Docker Compose**, **Nginx**, and **AWS** (EC2, VPC, Security Groups). Hands-on experience building CI/CD pipelines with **Jenkins** (Declarative/Scripted Pipelines, agent nodes, Jenkinsfile via GitHub) and **GitHub Actions**. Backed by **Prometheus**/**Grafana** monitoring, Kafka, Redis, and Spring Boot application-level insight.

TECHNICAL SKILLS

Cloud & DevOps	**Linux**, Bash/Shell Scripting, **Networking**, SSH, **Docker**, Docker Compose, Nginx, **Terraform** (IaC), **Ansible**, Chef, **Jenkins** (Declarative/Scripted Pipelines, Agent Nodes, Jenkinsfile), SonarQube, SonarScanner, **GitHub Actions** (CI), **AWS** (EC2, VPC, Security Groups, S3, CloudWatch)
Monitoring	**Prometheus**, **Grafana**, Graylog, AWS CloudWatch, Spring Boot Actuator, Micrometer, PromQL
Languages & Frameworks	Java, SQL, Spring Boot, Spring Security, Hibernate
Databases	PostgreSQL, MySQL, Redis, Flyway
Messaging & Architecture	Apache **Kafka**, Microservices, Event-Driven Design
Testing & Tools	Git, GitHub, Gradle, Maven, Postman, Swagger, JUnit 5, Mockito
Concepts	CI/CD, IaC, Configuration Management, Containerization, Troubleshooting, REST API Design, SDLC

PROFESSIONAL EXPERIENCE

DeepLure Research Pvt Ltd — Backend & Cloud Engineer **May 2026 – Aug 2026**

Java · Spring Boot · PostgreSQL · Redis · Docker · GitHub Actions · Graylog · AWS S3 · OVH Object Storage

- Analyzed business requirements and shipped **100+ production REST APIs** in Spring Boot across a B2B marketplace and an on-demand services platform, building configurable backend components.
- Created **GitHub Actions** workflows and containerized the Spring Boot services with **Docker**.
- Debugged and resolved production defects across API, database, and cache layers using **Graylog** logs.
- Created **AWS S3** and **OVH** object-storage buckets for application media storage.
- Built **Redis-backed asynchronous workers** for notifications, payment reconciliation, and booking expiry, and reduced database load **~40%** through Redis caching and query optimization.
- Implemented **JWT**/RBAC security, OTP verification, and **Razorpay** payments with idempotency keys and locking.
- Modeled normalized **PostgreSQL** schemas with Hibernate/JPA and Flyway; aligned API contracts with frontend teams via Swagger/OpenAPI; wrote **JUnit 5**/**Mockito** tests and fixed defects in Agile sprints.

SmartBridge Educational Services (APSCHE) — Data Analytics Intern **May 2025 – Jul 2025**

- Cleaned sales datasets with SQL joins and aggregates and built 3 Tableau dashboards for production and inventory review.

PROJECTS

Flight Booking System **Aug 2025 – Jan 2026**

Terraform · Ansible · Chef · AWS EC2 · Docker · Nginx · GitHub Actions · Prometheus · Grafana | GitHub

- Containerized **4 Spring Boot microservices** (Auth **:8081**, Flight **:8082**, Booking **:8083**, Notification **:8084**) with **multi-stage Docker builds**, keeping the Gradle build stage separate from the runtime image.
- Orchestrated the full stack with **Docker Compose** — services, per-service PostgreSQL databases, Redis, and Kafka — using Docker networking for container-to-container communication and **persistent volumes** for PostgreSQL data.
- Configured an **Nginx** reverse proxy (**nginx:alpine**, host port 80) with path-based routes for **/api/auth**, **/api/flights**, **/api/bookings**, and **/api/passengers**, forwarding Host and X-Forwarded-* headers; config mounted read-only.
- Externalized database, Redis, Kafka, and inter-service settings into **environment variables** for portable Docker images.
- Provisioned AWS infrastructure with **Terraform** (IaC) — custom VPC, public subnet, Internet Gateway, route table, security group, and an encrypted gp3 EC2 instance — with variables, outputs, and user data bootstrapping Docker and Git.
- Automated server configuration on the EC2 host with idempotent **Ansible** playbooks (custom inventories, SSH) for Nginx reverse-proxy setup, package management, and service enablement, and **Chef** recipes for web server configuration.
- Deployed the full stack on an **AWS EC2** instance and verified instance CPU monitoring with **AWS CloudWatch**.
- Exposed metrics with **Actuator** and **Micrometer**; **Prometheus** scrapes every 15s (target UP, queried with PromQL).
- Built a **Grafana** dashboard (JVM memory, application CPU, HTTP requests) connected to Prometheus over an **SSH tunnel**, running Grafana locally to avoid extra memory load on the EC2 instance.
- Configured a **GitHub Actions** workflow for Gradle build/test and Docker image build steps.
- Refactored a monolith into independent services with Flyway-managed databases and **pessimistic locking** to prevent overbooking; the Booking Service publishes **Kafka** booking-created events consumed by the Notification Service.

EDUCATION

Sri Venkateswara College of Engineering, Tirupati **2022 – May 2026**

B.Tech, Electronics & Communication Engineering CGPA: 8.5 / 10

CERTIFICATIONS

Oracle Cloud Infrastructure Foundations Associate — Oracle (Sep 2025) · **AWS** Cloud Practitioner (CLF-C02) Official Practice Exam — AWS Training & Certification (Nov 2025) · **DevOps** Basics for Everyone — IBM (May 2024)
